

XingTu + Amulet

Hypothesis Validation Questionnaire

Based on The Founder's Playbook (Anthropic, May 2026)

Project: XingTu — Chinese Name Generator + BaZi Fortune Predictor

Stage: Idea Stage to MVP Stage transition

Date: June 2026

Status: Pre-validation prototype exists, zero customer discovery

PART 1

Is the problem real?

1.1 Who exactly has this problem?

Who needs a Chinese name? (age, gender, country)

[]

— Not researched

Who wants daily BaZi fortune readings?

[]

— Not researched

Which segments are willing to pay for this?

[]

— Not researched

1.2 How real is the problem?

Monthly search volume: Chinese name generator / BaZi?

[]

— Not checked

Existing solutions? (Co-Star, The Pattern, Chinese apps)

[M]

11 competitors analyzed

Why are users DIssatisfied? (reviews in app stores)

[]

— Not collected

1.3 What do users do NOW?

- Free online name generators?

- Offline BaZi masters (f2f consultation)?
- Simply ignore the need?

1.4 Amulet hypothesis

Is there demand for Chinese amulets / talismans online?

[]

— Not checked

Who is the target amulet buyer? Same user or different segment?

[]

— Not defined

How much would they pay for a blessed name amulet?

[]

— Not checked

PART 2

Is the solution right?

2.1 Feature parity vs competitors

Feature	XingTu	Competitors
Name generator EN>CN	Ready [V]	?
BaZi prediction	Ready [V]	?
Amulet tied to name	Not ready []	?
Behavior tracker	Not ready []	?
Works offline	Yes [V]	?
Monetization	Not solved [?]	?

2.2 Three critical assumptions

1. Users will BUY an amulet based on their generated name
If false: only ad-revenue, business model breaks
2. Free generator -> traffic -> conversion to paying users
If false: traffic exists but conversion under 0.5%
3. BaZi prediction creates retention (return visits)
If false: user comes once, zero LTV

PART 3

Enough signal to build?

3.1 What we HAVE

HTML prototype (v6) with Wheel of Fate	[V] Ready
Flutter app (Android + Web) — build passes	[V] Ready
BaZi engine (pillars, elements, animals)	[V] Ready
Name generator DB (75 EN>CN + 20 CN>EN names)	[] Missing
Pitch package (exec summary, fin model, comp analysis)	[V] Ready
User portraits document	[V] Ready
Viral strategy doc	[V] Ready
Content plan (YouTube/TikTok)	[V] Ready
Amulet e-commerce flow	[] Missing
Behavior tracker / analytics	[] Missing
Beta testers / real users	[] Missing
Customer discovery interviews (0)	[] Missing
Scope definition document	[] Missing
Measurement framework (retention, metrics)	[] Missing
CLAUDE.md / ADR for project	[] Missing

3.2 Idea Stage Exit Check (from playbook)

Problem is real? (Chinese names, BaZi — demand exists)	[V] Confirmed
We know EXACT user? (name, gender, country, behavior)	[] Unknown
Solution addresses the real problem (not assumed one)?	[] Unknown
Enough signal for building commitment?	[] Unknown

MAIN GAP: Zero customer discovery. No confirmation the problem is real for specific people.

PART 4

What to build first (MVP scope)

4.1 MVP v1.0 — Must have

Name generator EN>CN + CN>EN with element selection

BaZi fortune chart from date of birth

Wheel of Fate animation

Amulet with new name (catalog > cart > payment)

Behavior tracker (screen flow, conversion, retention)

Multi-language (EN / RU / ZH)

Share image generation (virality)

4.2 Scope boundary — NOT in MVP

Login / registration wall (too early for conversion)

Full history of all predictions

AI-powered interpretation (complex, expensive to run)

Social feed / community features

4.3 What's MISSING before any launch

Security review of codebase

[] Needs work

Privacy policy

[] Needs work

Payment integration (Stripe / equivalent)

[] Needs work

Analytics (Amplitude / PostHog / custom)

[] Needs work

Amulet supplier / manufacturing partner

[] Needs work

Pre-launch landing page (email capture)

[] Needs work

Beta testers (5-10 people)

[] Needs work

CLAUDE.md / architectural docs

[] Needs work

PART 5

Amulet monetization funnel

5.1 Conversion funnel (hypothesis)

Visit	100%	All traffic
Generate name	60% (hypothesis)	Need prototype data
View amulet	10% (hypothesis)	Need prototype data
Add to cart	—	Unknown
Payment	2-5% (hypothesis)	Need MVP data
Delivery	—	Need supplier

5.2 Business model parameters

Parameter	Hypothesis	Needs
Traffic CPM	\$5-15	Analysis
Conversion to name gen	60%	Prototype data
Conversion to amulet view	10%	Prototype data
Conversion to purchase	2-5%	MVP data
Average amulet price	\$15-30	Market research
Cost per amulet (prod+ship)	\$5-10	Supplier quote

5.3 What the behavior tracker should measure

How many reached name generation screen
How many clicked 'Get Amulet' CTA
How many clicked amulet in cart view
How many started checkout process
How many completed payment
Retention: Day 1 / Day 7 / Day 30
How many returned for a second prediction

PART 6

Roadmap

Phase 1 — Hypothesis validation (1-2 weeks)

Customer discovery: 5-10 interviews with target users

Target audience survey (Google Forms / Typeform)

Competitor review analysis (read app store reviews)

Phase 2 — MVP Scope + Build (2-3 weeks)

Scope definition document (what, why, what NOT)

Amulet flow: catalog > cart > payment (Stripe)

Behavior tracker: custom events pipeline

Expand name database to 200+ entries

Security review before any deploy

Phase 3 — Beta Launch (1 week)

5-10 beta testers from target audience

Measurement framework dashboard

Feedback loop: structured intake + weekly synthesis

Product Hunt / Reddit / relevant community launch

Phase 4 — Full Launch (2-4 weeks after PMF)

Android APK to Google Play Store

Web to custom domain

Content marketing (YouTube shorts, TikTok)

Iterate based on real user feedback

PART

Summary

Current stage: Idea Stage (incomplete)

Idea Stage — Problem-solution fit	Started, NOT finished
MVP Stage — Product-market fit	Not started
Launch Stage	Far away
Scale Stage	Far away

Critical gap: Zero customer discovery interviews

No confirmation that the problem is real for specific, identifiable people.

Next step: 5-10 interviews with target users.

Based on: The Founder's Playbook — Building an AI-Native Startup (Anthropic, May 2026)
